

# Build a Data Centre!

# Build your own data centre like Kao Data!

Data centres help run our world, but most people don't even know what they are!

A data centre is a really big, really strong building that has hundreds of special computers inside called servers. Every time you look at a website, play a tune on Spotify, upload a photo to Instagram, do a Zoom call, or play Minecraft, you are using information (data) that is actually stored on these servers.

Your family will probably be connected to a data centre hundreds of times a day. And without data centres the Internet wouldn't work.

Data centres need to be really secure and super-clean and they are very high-tech. They use lots of power (electricity) and are designed, built and run by some very clever people!

This booklet shows you how to build your own data centre. It looks like Kao Data, an award-winning data centre just outside of London.

Simply follow the instructions on pages 3, 4 and 5. And when you're finished, why not email a picture of your model to: [kaoademy@kaodata.com](mailto:kaoademy@kaodata.com) (You'll be using a data centre when you do this!)

This is what your completed data centre model should look like!

# Instructions

You will need:

- Pages 6, 7 and 8 printed out onto white card or thick paper
- Scissors
- Glue stick

1.

Print out the base of the data centre (page 6) and the cut-out sheets (pages 7 and 8) on to A4 card or paper.

2.

Carefully cut out all the shapes (pages 7 and 8) - along the green dotted lines. (Be careful not to cut the flaps off!)

3.

Next, fold the flaps - along the red solid lines. (We'll use these to attach the pieces together).

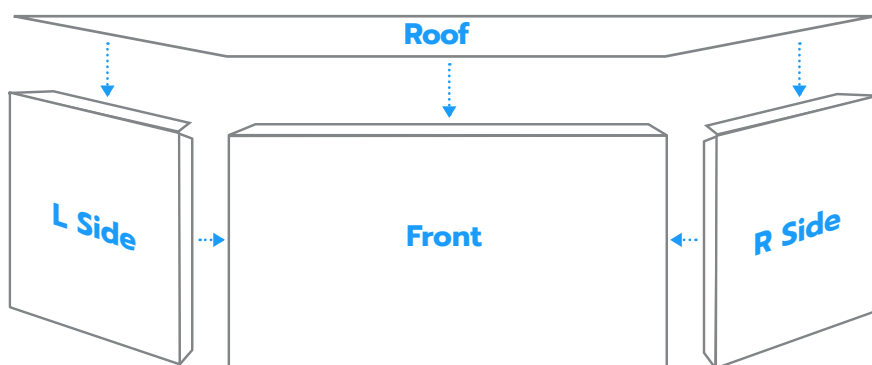

**Fold** Fold and stick

4.

Using a glue stick, get building! Glue each flap on the Front, Back and Sides of the data centre and stick the matching numbers together. Then attach the Roof in the same way.

### Did you know...

Although this model is pretty small, many data centres such as Kao Data, are huge. The largest data centre in the world is in China and is bigger than 168 football pitches!

5.

Your data centre is now ready to be attached to the base (page 6). Stick it down carefully on the space shown.

### Did you know...

Data centres must be in safe and secure locations, protecting their servers from floods, severe weather, earthquakes and even volcanoes. Data centres can be found all over the world and even in space!

6.

Every data centre needs back-up generators and it's time to build yours! Carefully fold the generator cut-out so it has 3 sides and a roof, and glue it to the back of the data centre. There's a space on the base for it.

**Did you know...**

It's really important that data centres always have power so the servers stay on. Back-up generators help a data centre stay up and running even during a power cut.

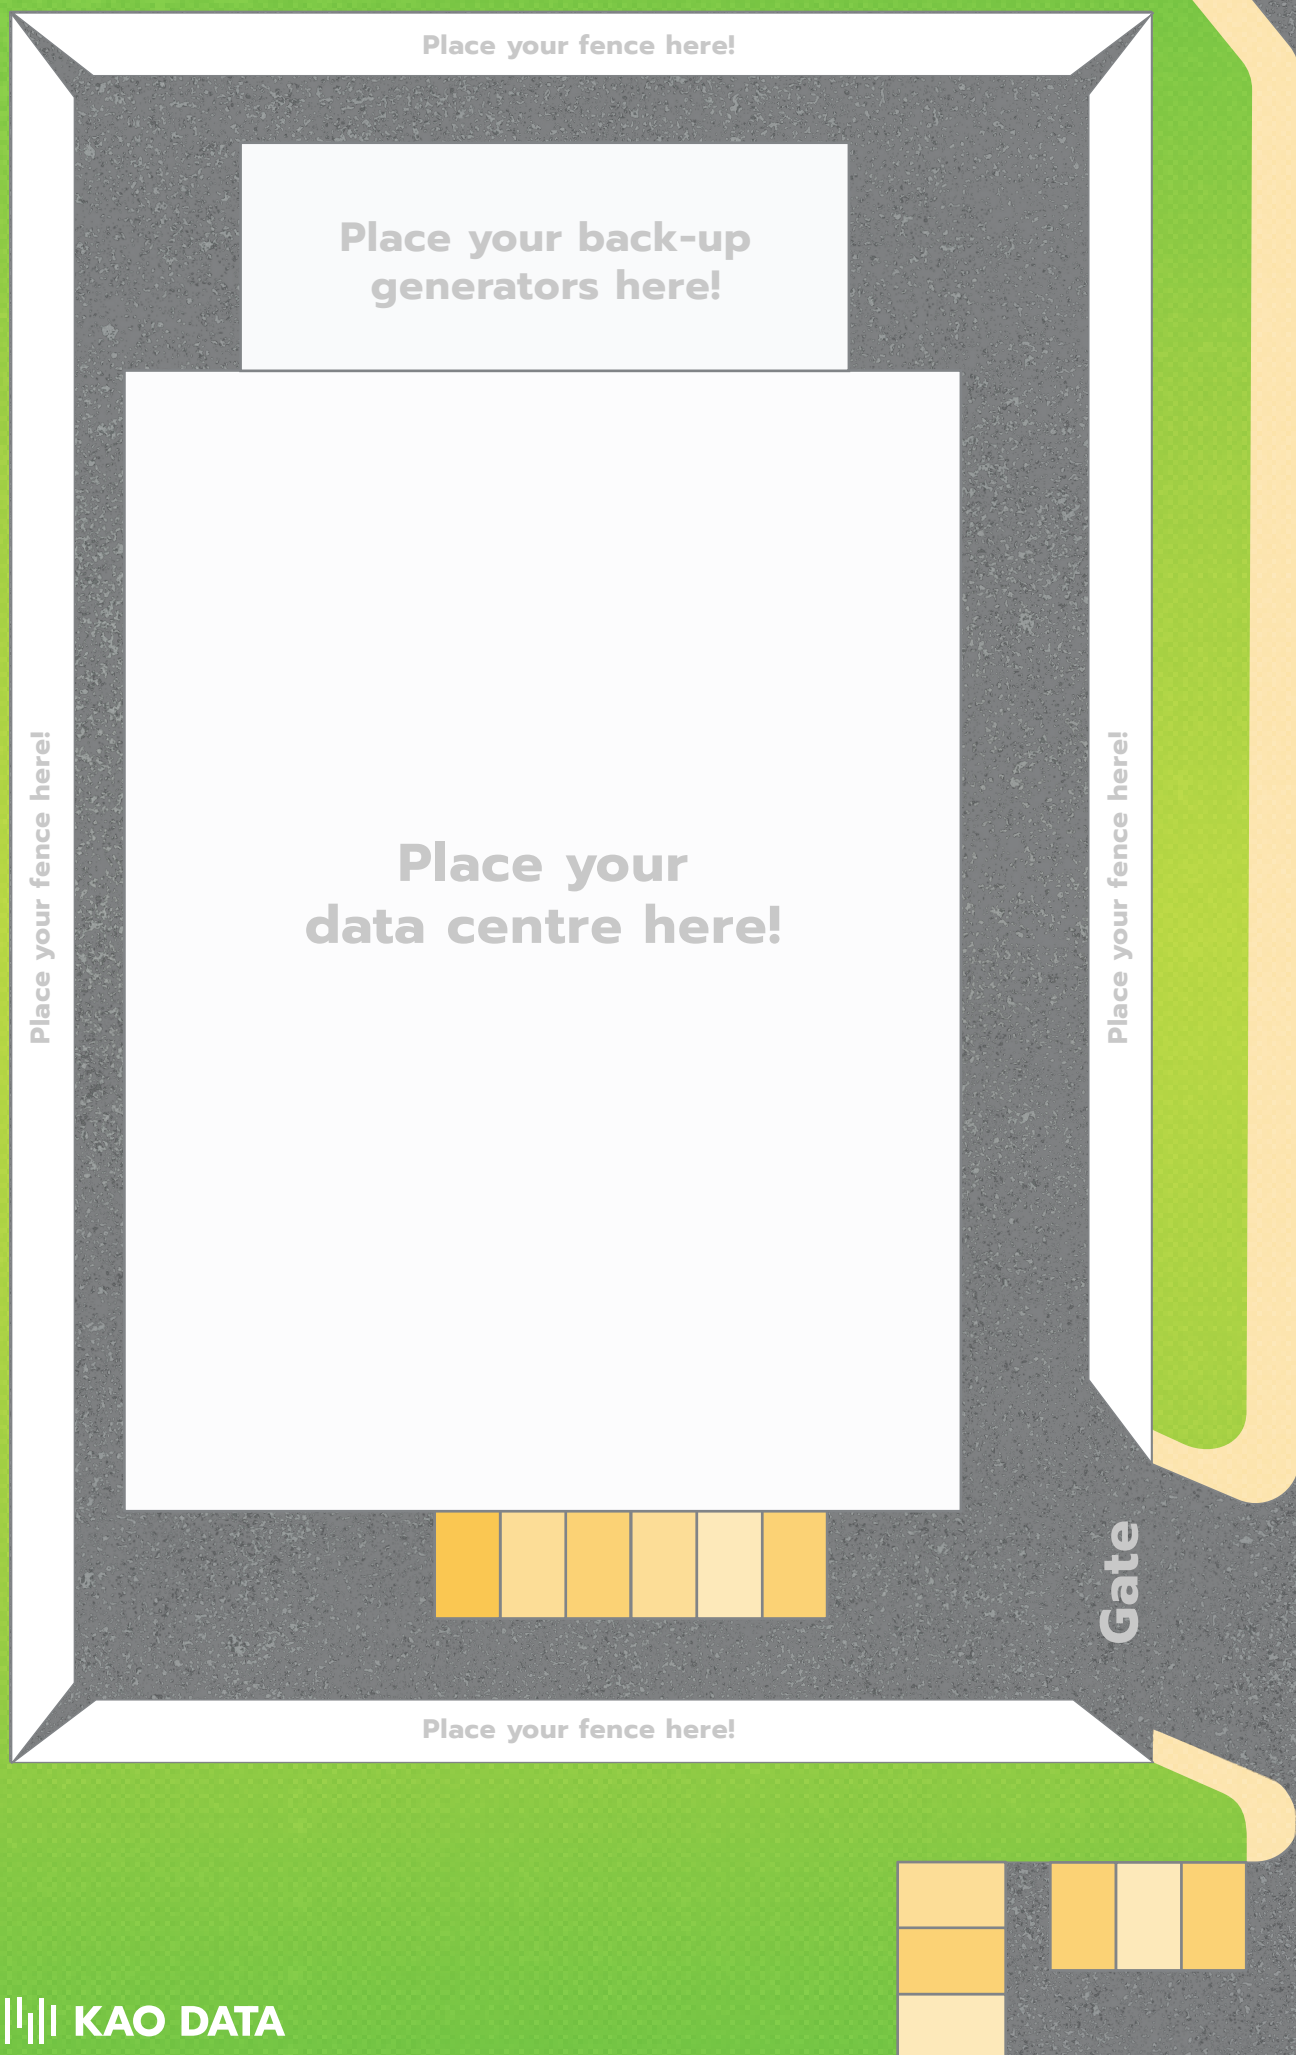

7.

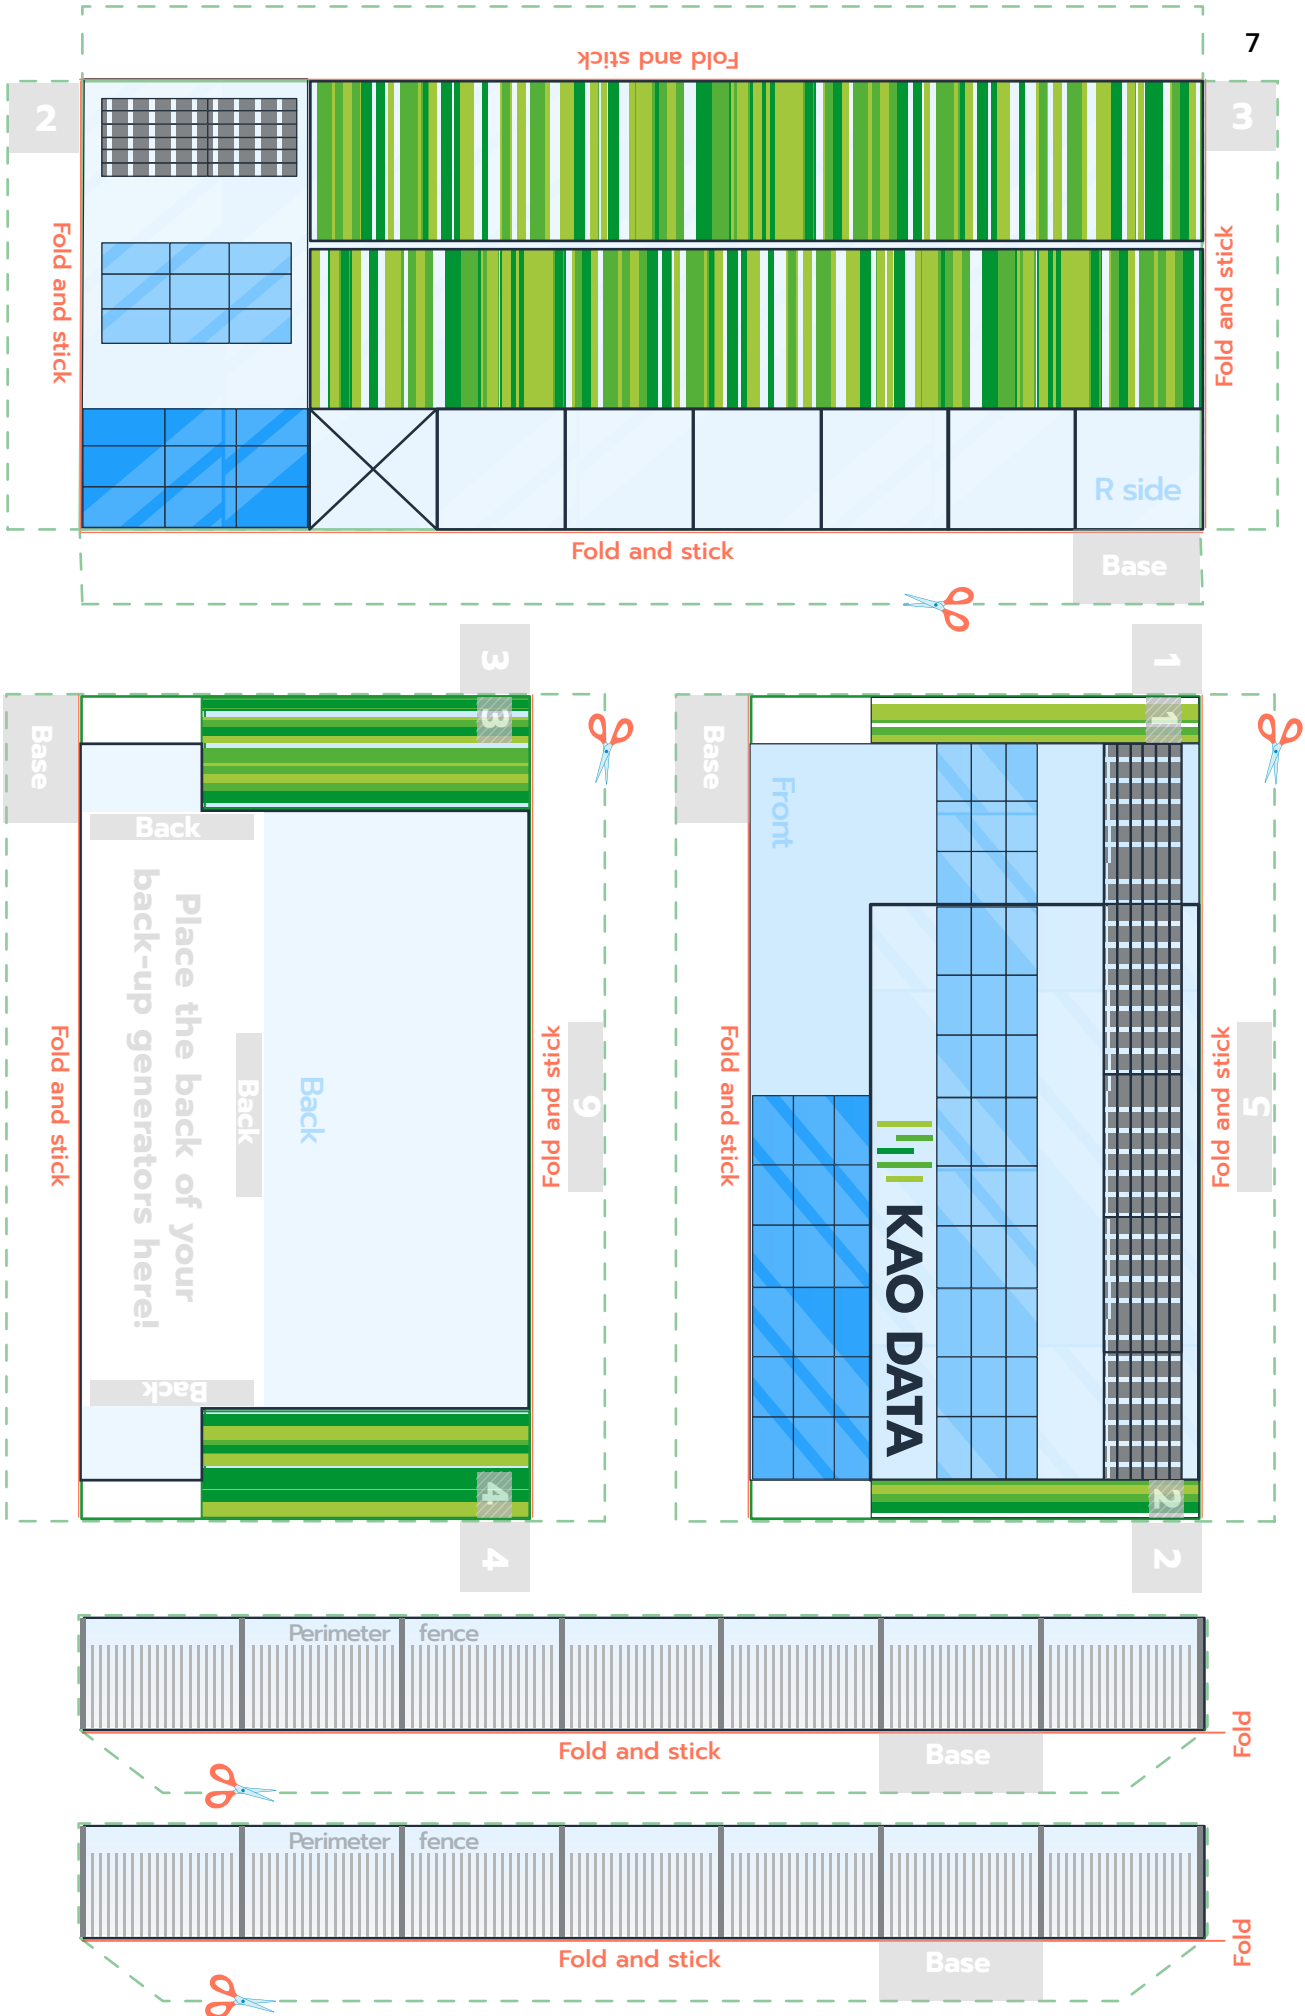

Finally, you need to make your data centre secure. Stick the fences onto the base around the outside (perimeter) of the data centre. (Make sure the gate is in the right place otherwise no one can get in!). You could use a little bit of sticky tape to join the corners of the fences together.

**Did you know...**

It's very important a data centre is secure. At Kao Data we use CCTV cameras, large fences, special gates and security guards to make sure only the right people can enter. If your name's not down, you're not coming in!

# Why are data centres important?

The world we live in today is increasingly reliant on data - with computers and digital devices all around us - at school, work and play.

Data centres store and process all the data in the world. In the future we will need data centres even more when cars become driver-less and artificial intelligence (AI) supports more of the things we do.

Data centres need clever people to design, build and run them. Maybe you'll work in a data centre in the future!

# Word search

Find the words below – they're all really important in the world of data centres!

- Server
- Power
- Generator
- Secure
- Internet
- Renewable
- Clean
- Computer
- Network
- Campus
- KaoData
- Datacentre

## AMAZING FACTS

Here are 5 mind-boggling facts about data and data centres to wow your family and friends!

- ★ If you put all the data created in one day onto DVDs, you could stack all those DVDs on top of each other and **reach the moon - twice!**
- ★ It would take **over 180 million years** to download all of the data on the Internet!
- ★ Data centres can be found in some **very strange places** - under the sea, on Antarctica, in deserts, underground, on ships and even in space!
- ★ Kao Data's campus in Harlow is on the same site where **Sir Charles Kao invented the fibre optic cable in 1966**. Without this amazing technology we wouldn't have the **Internet!**
- ★ The UK's fastest and most powerful supercomputer is in **Kao Data's data centre in Harlow**. It's called Cambridge-1.

# SPARK, IGNITE, FUEL, ILLUMINATE

CAMBRIDGE  
SCIENCE  
CENTRE

## UNLEASH YOUR INNER SCIENTIST!

A unique, fun hands-on science centre for children and young people.

Over 30 interactive Science, Technology, Engineering and Maths exhibits to discover.

Discover science through our stimulating activities and inspirational shows.

Our Centre is open to schools, the community and the public.

**“THE BEST MUSEUM I’VE EVER BEEN TO”**

## WE WANT

Every young person to enjoy Science, Technology, Engineering, and Mathematics (STEM) and have access to the better life, community, education and career opportunities that are offered through use of creative, analytical thinking.

## WE ACHIEVE THIS THROUGH

Our interactions with schools, communities, parents, grandparents, carers and most importantly, children.

**SUPPORTED BY KAO DATA  
AND OUR EXECUTIVE  
COUNCIL MEMBERS**

## FIND US
